PacsCube

Record DICOM images and results onto discs for easy portability.

COST EFFECTIVE AND AFFORDABLE

DatCard understands the healthcare industry is always evolving. With PacsCube and the Virtual Image Exchange (VIE), DatCard embraces the reality that the delivery of medical images and reports must encompass both portable media as well as secure and reliable online access giving you the best of both worlds!

PacsCube takes DICOM images and results and seamlessly records them onto discs. It embeds a lite DICOM viewing tool so images and reports can be viewed from any computer. Discs are uniquely labeled with patient and study demographics, facility logo and audit trail identifier.

PacsCube is one of the most stable and reliable DICOM distribution solutions available in the medical community. PacsCube enables you to communicate with patients and referring physicians, while realizing enhanced workflow efficiency and significant cost savings.

The PacsCube solution provides hospitals and imaging centers with a totally flexible, cost-effective method for delivering medical images and reports.

ENHANCES WORKFLOW

▶ Fully automates the burning and customization process, producing consistent, professional looking media while reducing your time and overall cost

▶ Requests can be submitted from any computer across the enterprise and multiple jobs can be processed simultaneously, freeing up resources and workstations

▶ Automatically spans multiple CDs if necessary or alternately burns to a DVD, to handle even the most complex job request

▶ Produces a label for each disc with a unique audit trail identifier and also generates an audit trail report to aid in maintaining the HIPAA standard

▶ Supports a variety of OEM viewers

▶ From encryption to decryption to importation of discs, the entire process is easy, user friendly and requires no additional software

KEY SYSTEM FEATURES

- Choice of robotic configurations to meet disc production and budgetary requirements
- Disc encryption
- Supports multiple DICOM viewers
- Web based media importer and document scanning application
- Auto-spanning of discs
- Audit trails
- Patented technology
- Job status queue
- Web based dashboard
- AutoBurn
- One click patient de-identification
- Customized labeling and splash screen
- Send patient data on disc or to the cloud using one user interface
- Teaching files
- Multi-label capability
- Multi-language support
- Remote server DICOM query retrieve
- Fully automated
- Image collaboration
- 24/7 support available

KEY BENEFITS

- Query and retrieve DICOM information from the hospital network
- Disc encryption for patient privacy
- Import an unlimited number of outside discs into your enterprise-wide archive
- Experience significant labor and cost savings
- Easily access patient images and reports
- Gain access to the patient's complete medical record
- Improve communication and collaborative efficiency
- Patients receive a personalized disc of their medical images/results within minutes of their examination
- Easily share images and results with clinicians involved in diagnosis and treatment
- Conveniently send patient images and data via disc or Virtual Image Exchange (VIE) using one user interface
- Reduce occurrences of repeat or unnecessary procedures
- Reduce insurance company denials of duplicate imaging procedures
