Virtual Image Exchange (VIE)

Share images and reports via DatCard's proprietary cloud network for secure, online image sharing anywhere, anytime!

COST EFFECTIVE AND AFFORDABLE

Virtual Image Exchange (VIE) extends clinical image access beyond the boundaries of your institution, allowing the exchange and control of images through DatCard's cloud network. Recipients can view images and reports anywhere, anytime and import the data into their internal archive. VIE helps institutions improve outcomes, cut costs and expand their user network.

VIE provides hospitals and imaging centers with instant online access and cost-effective methods for delivering medical images and data, anywhere, anytime.

ENHANCES WORKFLOW

▶ Extends your ability to receive, manage and distribute clinical images and data from disparate systems—beyond the walls of your healthcare facility—without reinventing your workflow and standard of care

▶ Supports images from any source, providing seamless, collaborative access to images across facilities, between imaging departments and referring clinicians—allowing for secure and validated exchange of information on demand

▶ View and download images and data anywhere, anytime

▶ Import an unlimited number of outside discs into the cloud or internal archive for enterprise wide viewing

▶ Leverages existing HL7 and DICOM based connectivity

▶ Features a zero install viewer for DICOM image and report display on both MAC and Windows desktops

▶ Download and view images and reports on your handheld devices

▶ End to end encryption of patient data

▶ Data is safeguarded within a premier, securely managed globally scalable hosting facility that is HIPAA compliant and SSAE 16 audit certified
